

## Variable Message Sign (VMS)

Traffic management technologies are available, such as electric traffic information signboards, "Variable Message Sign" or "VMS," and traffic video monitoring cameras on roads. The VMS is generally used on highways to display traffic conditions such as traffic congestion conditions, warning information like traffic accidents, road conditions, etc.

The VMS used is multi-color or single-color LED type display with a 3G/4G, Wireless or RF Network communication system. These VMS Systems can Display Images, Videos, Signs, or Text as per the requirement. The Power consumption of the system depends on the media, Pixel Pitch, Colors and content displayed.

### Fixed VMS Screens:

### Mobile/ Portable VMS Screens:

### Address:

#### LAHORE HEAD OFFICE:

Plot # 505-E, Bhalla Road,  
near Bhalla chowk, Block  
E Johar Town,
